

Latest Nanotechnology In water filtration

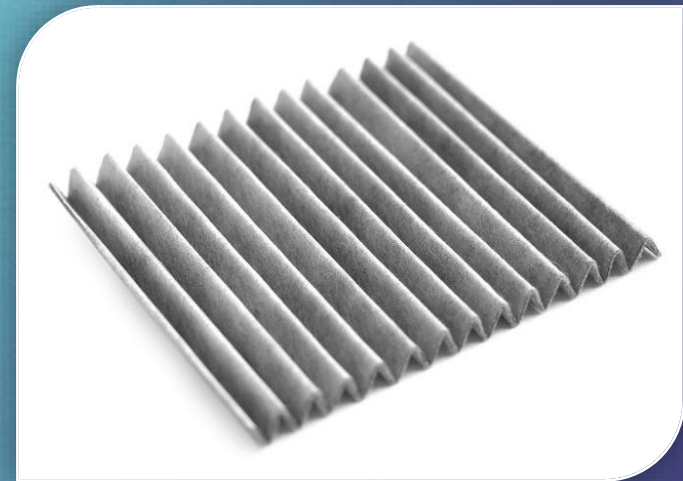

Nanofillers

Innovative in water purification

The technology is a NASA innovation that allows astronauts to get drinking water from water from subterranean glaciers on Mars It was used exclusively by NASA until recently and released for commercial use Filter is manufactured in the USA

How the innovative Filters technology works

The filters inside the filter are aluminum nanofibers, made of a material called Boehmite, with a diameter of about 2 nanometers (for comparison like a sheet of 100,000 nanometers thick) and the surface area of the fibers is 500 square meters per gram.

Why choose Filtration Units From *Quell*[®]

- NASA technology
- Easy to install
- Rapid filtration
- There is no wastage of water
- without the need for electricity
- Suitable for all sectors
- Removes viruses
- Removes bacteria
- Improves taste
- Removes lead
- Removes chlorine
- Long lasting filter

Individuals, Homes, Companies, Factories

Quell NOMAD

Wherever you are, you will have access to clean and safe water everywhere

The filter bottle with unique nano filter technology will provide you with the cleanest water possible by removing over 99.9% of all contaminants...

Quell NOMAD filter properties

The volume is 700 ml

Compact, lightweight and ergonomically shaped

Drinking hole with spill protection

The filter cartridge is replaceable

The protective cap of the bottle also doubles as a cup

Quell Eivaoa

You can take Quell Eivaoa

Take you on vacation abroad and prepare safe drinking water for you and your family wherever you are.

Quell Eivaoa Properties

The Size is 1.6 liters

Long filter cartridge, up to 3 months

Replacement filter ensures

high quality filtration

3 value pack replacement filters

Quell Under Sink

The compact, under-sink design ensures a convenient filtration solution. It also includes a chrome faucet that will fit well in any kitchen.

Place the filter part under the sink and you get water right away with all the components needed to install

Advantages of filters

Modern and compact design suitable for any kitchen.

The pump system for households with low water pressure

Immediate availability of filtered water in the required Less It has an indication of the need to replace a specific filter

Affordable long life filters

CounterTop

The device easily connects to your tap, so you can instantly enjoy clean, great-tasting water. It's a bargain for homeowners and renters, as no drilling is required when installing the filter unit. Everything you need for installation is included in the package

Unit properties

Two-stage filtration

post without the need for electricity

Disinfection with antimicrobial silver

The flow rate is 2.5 liters / minute

Filter capacity: 3000 liters

.Optimum water pressure: 100-400 kPa

Quell Trinity 600

High water quality with incredible efficiency

So if you are looking for a water filtration solution and want to save space under the sink and a lot of the worries associated with it, it is perfect for your home. It is easy to install and maintain, and most importantly, it is more efficient than most filters.

Modern design suitable for any kitchen,

Small size, easy to put under the sink

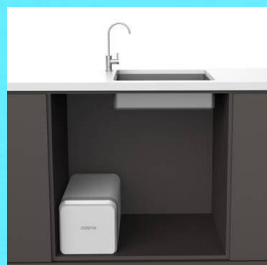

Suitable for households with low water pressure

Filtered instant availability in the required size

Less consumption

Indication of the need for a specific filter

Long life filters

Quell®

is one of the leading companies in water purification. It is equipped with our unique technology, which you will not find in any other brand in the market

Choose from a wide range totally according to your needs.

If you want to drink delicious water that is truly free from unwanted impurities, then it will definitely be the best choice for you.
